

App Name: _____

Part 1: Audit

Auditor Name: _____

1. On Nissenbaum's understanding of privacy, what matters is the contextual norms for how information is collected and used. How might users expect their information to be used by an app like the one your partner is designing? How might they *not* expect their information to be used?
2. Given the statement of what data is collected by the app, are there any axes of data that should not be collected? Why?
3. Given the statement of what data is collected by the app, are there axes of data you believe will need to be collected which are not stated?
4. In what ways does the app incentivize compulsive behaviors?
5. In what ways does the app offer users the right kind of control (e.g., by mitigating compulsion or similar)?
